## Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date          | 15 October 2022                            |
|---------------|--|
| Team ID       | PNT2022TMID39604                           |
| Project Name  | Project – A GESTURE BASED TOOL FOR STERILE |
|               | BROWSING OF RADIOLOGY IMAGES               |
| Maximum Marks | 4 Marks                                    |

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                    |
|--------|-------------------------------|---|
| FR-1   | Hand detection                | Filters out hand from video capturing device.         |
| FR-2   | Skin detection                | Filter the objects of non skin-coloured.              |
| FR-3   | Filtered object detection     | Read and recognize clusters skin coloured objects.    |
| FR-4   | Hand calibration              | Perform adjustment according to user's dominant hand. |
| FR-5   | Browsing gesture control mode | Hand gesture recognized for commands.                 |

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description   |
|--------|----------------------------|---|
| NFR-1  | Usability                  | Easy to use for all users with minimal instruction. It    |
|        |                            | is understandable by non-technical users.                 |
| NFR-2  | Security                   | Application will be permissible to used only in           |
|        |                            | secure  |
|        |                            | Networks and less feasibility of insecurity.              |
| NFR-3  | Reliability                | It is operable in all lighting conditions. Regardless, of |
|        |                            | the brightness level in user's operating                  |
|        |                            | environment.  |
| NFR-4  | Performance                | Minimize the number of calculation to perform hand        |
|        |                            | gesture detection and to improve image quality            |
|        |                            | resolution.   |
| NFR-5  | Availability               | This application supports recognition of gesture only     |
|        |                            | through internet connection.                              |
| NFR-6  | Scalability                | Scalable to support future developments and shall         |
|        |                            | be at least 50% extensible to allow new gesture           |
|        |                            | recognition features to be added to the systems.          |
